

Bloom's Taxonomy Levels:

1. Remember 2. Understand 3. Application 4. Analysis 5. Evaluation 6. Creation

Programme Name: MSc. (Applied Mathematics)**Programme Specific Outcome (PSO)**

- PSO1. Solve mathematical problems using analytical as well as numerical methods.
- PSO2. Assimilate complex mathematical ideas and arguments.
- PSO3. Recognize the relationships between different areas of Mathematics and the connections between Mathematics and other disciplines.
- PSO4. Give organized written and verbal explanations of mathematical reasoning in a precise and articulate manner.
- PSO5. Demonstrate basic mathematical understanding and computational skills.
- PSO6. Apply soft computing techniques.
- PSO7. Implement various algorithms using advanced Object Oriented Programming languages.
- PSO8. Demonstrate facility in computer programming, data processing, numerical simulation, scientific visualization, and virtual experimentation.
- PSO9. Describe the study of fundamental and advanced concepts in Mathematical Analysis.
- PSO10. Select appropriate methods for solving ordinary and partial differential equations which is arising in Mathematical modelling of problem.
- PSO11. Use appropriate software to solve practical problems.
- PSO12. Employ advanced statistical and optimisation techniques.
- PSO13. Build, Manage and Lead a team to successfully complete an industrial project and communicate across teams and organizations to achieve professional objectives.
- PSO14. Formulation of mathematical models and simulation of the problems in real world.
- PSO15. Inculcate their skills to deal with industrial problems.
- PSO16. Advanced understanding to qualify for various competitive exams to build their academic as well as industrial career.
- PSO17. Electives in the final year which elaborate prerequisite of the research field.
- PSO18. Hands-on practice for self preparation and developing presentation skills through project and seminar.
- PSO19. Training and Exposure to research literature and thesis writing through dissertation.

Syllabus of Courses

	The Maharaja Sayajirao University of Baroda Faculty Technology and Engineering Department of Applied Mathematics	Academic Year	2019-20							
M.Sc. (Applied Mathematics): Regular Programme										
Year	I	Core / Elective / Foundation AMT2110: APPLIED ANALYSIS-I	Credits / Hours per week					05		
Semester	I	Year of Introduction: 2001 Year of Syllabus Revision: 2014	Maximum Marks / Grade					100		
Mode of Transaction		Lectures								
Course Outcome (CO) AMT2110 CO1 Understand the limitations of functions of real variables and importance of studying functions of complex variables and its applications in physical phenomenon. CO2 Learn about the exploration of the algebraic operations on the complex number along with geometry in argand diagram. CO3 Able to apply continuity, differentiability, analyticity of f(z) in particular domain. CO4 Learn about the harmonic and harmonic conjugate functions and able to apply potential theory. CO5 Understand the mapping / transformation and able to plot image in w-plane. CO6 Able to evaluate any complex integral using theory of Cauchy's. CO7 Classify different types of singularities and be able to apply residue theory to evaluate integrals. CO8 Able to describe the ideas of Laplace Transforms and their applications to solve initial and boundary value problems.										
Unit No.	Topic		Contact Hours	Weightage (%)	BT Level	CO	PSO	Element s of Employa bility (Emp)/ Entrepre neurship (Ent)/ Skill Develop ment (SD)	Releva nce to Local (L)/ Nation al (N)/ Region al(R)/ Global (G)	Relation to Gender (G), Environme nt and Sustainabil ity (ES), Human Values (HV)and Professiona l Ethics (PE)

1	Functions of complex variable, Continuity and Differentiability of function of complex variable, necessary and sufficient conditions for differentiability of $f(z)$, Holomorphic and Homomorphic functions, Elementary properties of holomorphic functions, Harmonic functions and its applications to potential theory.	12	20	1,2,4,5	CO2 CO3 CO4	PSO2 PSO4 PSO5 PSO16	EMP	G	PE
2	Mapping and transformations: Linear transformation, Inversion and Linear fractional transformation, Conformal mapping and its applications, Mapping by elementary functions and some special functions.	08	14	2,3,5	CO5	PSO1 PSO5 PSO9 PSO16			
3	Complex Integrals: contour and contour integrals, different theorems due to Cauchy, Consequences of Cauchy's theorems, Morera's theorem. Liouville's Theorem, Maximum modulus theorem, Fundamental theorem of algebra.	12	20	2,3,4,5	CO1 CO6	PSO2 PSO4 PSO9 PSO16			
4	Power series representations of $f(z)$	08	14	1,2,5	CO1	PSO1 PSO5			
5	Singularities and Residues of $f(z)$, Residue theorem. Applications of residue theory.	08	14	1,3,5	CO7	PSO1 PSO4 PSO16			
6	Reorientation of Laplace Transform and Inverse Laplace transforms, Existence theorem of Laplace Transform, Laplace Transform of Heaviside function and its applications, step functions, Unit impulse function, Laplace transform of Dirac's Delta function and Periodic function, Applications of Laplace transform to ODE (involving Heaviside function and Dirac delta function), PDE and Integral equations, Inversion integral.	12	20	1,2,3,5	CO8	PSO1 PSO5 PSO7 PSO10

Syllabus of Courses

		The Maharaja Sayajirao University of Baroda Faculty Technology and Engineering Department of Applied Mathematics		Academic Year			2019-20				
M.Sc. (Applied Mathematics): Regular Programme											
Year	I	Core / Elective / Foundation AMT2123: Linear Algebra and Calculus of Variation		Credits / Hours per week			05				
Semester	I	Year of Introduction: 2014		Maximum Marks / Grade			100				
Mode of Transaction		Lectures									
Course Outcome (CO) AMT2123 CO1: Understands and implement the concept of diagonalization to find out solution of system of linear differential equations using exponential of a matrix. CO2: Introduces properties of different types of operators. CO3: Understands the Cayley-Hamilton theorem for operators and Jordan Canonical form for $n \times n$ matrices. CO4: Can analyze the stability of linear systems. CO5: Able to apply the theory of eigenvalues and eigenvectors to Spectral theorem and Quadratic forms. CO6: Understand what functionals are, derive and use the Euler-Lagrange equation to find differential equations for stationary paths CO7: Solve differential equations for stationary paths, subject to boundary conditions, in straightforward cases.

Syllabus of Courses

	The Maharaja Sayajirao University of Baroda Faculty Technology and Engineering Department of Applied Mathematics	Academic Year	2019-20							
M.Sc. (Applied Mathematics): Regular Programme										
Year	I	Core / Elective / Foundation AMT2105: Ordinary Differential Equations	Credits / Hours per week					05		
Semester	I	Year of Introduction: 1974 Year of Syllabus Revision: 2014	Maximum Marks / Grade					100		
Mode of Transaction		Lectures								
Course Outcome (CO) AMT2105 CO1 Basic understanding of how any physical phenomena can be modeled by ordinary differential equations and difference equations. CO2 Understand existence and uniqueness of solutions in closed form and power series form. CO3 Gain a thorough understanding of the state transition matrix, its properties, its methods of computing and its role in the study of system dynamics. CO4 Qualitative analysis of a dynamical system using different tools, able to sketch a phase portrait of linear and non-linear one and two dimensional Systems of ODEs, Understand the phase plane analysis of the dynamical systems, Stability analysis of equilibrium solutions of linear systems. CO5 Linearization of non-linear systems, determine the stability of equilibrium solution of the nonlinear dynamical systems, limit cycles and there stability, bifurcation CO6 Sturm-Liouville eigen value problem, series solution of ODE's.										
Unit No.	Topic		Contact Hours	Weightage (%)	BT Level	CO	PSO	Element s of Employa bility (Emp)/ Entrepre neurship (Ent)/ Skill Develop ment (SD)	Relevan ce to Local (L)/ National (N)/ Regional (R)/Glob al (G)	Relation to Gender (G), Environ ment and Sustaina bility (ES), Human Values (HV)and

									Professional Ethics (PE)
Note: The topics (1-5) will be discussed for both continuous dynamical systems and discrete dynamical systems.									
1	- Mathematical modeling by means of ordinary differential equations and difference equations - Reduction of nth order equation into first order systems - Existence and uniqueness of solution of a nonlinear system of ordinary differential equations, Lipschitz condition, Gronwall's lemma.	16	26.72	1,2,3,4,5	CO1 CO2	PSO2 PSO4 PSO9 PSO15 PSO16 PSO17	EMP	G	PE
2	- Phase plane Analysis - Linearization of nonlinear systems - Autonomous and non-autonomous Linear system Theory: Linear Dependence and independence of solution, Wronskian.	10	16.7	1,2,3,5	CO4 CO5	Except PSO6 PSO12 PSO13 PSO18			
3	- Transition matrix(fundamental matrix) for a linear system, solution of a nonlinear system by variation of parameters method, - computation of transition matrix , eigenvalue method, Peano-Backer series method.	10	16.7	1,2,3,5	CO3	Except PSO6 PSO12 PSO13 PSO18			
4	Stability of dynamical systems, Lyapunov, exponential and asymptotic stability and their characterization.	10	16.7	1,2,3	CO4 CO5	Except PSO6 PSO12 PSO13 PSO18			
5	Sturm -Liouville equations, Eigenvalue problems	06	10.02	1,2,3	CO6	PSO2 PSO4 PSO9 PSO15 PSO16 PSO17			
6	Series solution of non-autonomous continuous systems, Bessel and Legendre series, Frobenius method	08	13.36	1,2,3,5	CO2	PSO2 PSO4			

						PSO9 PSO15 PSO16 PSO17 PSO10

Mode of Transaction		Term work, Practical and Viva							
No.	Experiment					Course Code	BT Level	CO	PSO
1	Practicals on Matlab programs: - Polynomial and matrix operations - Finding mean, median , mode and frequency distribution - Plotting Graphs					AMT 2124	1,2,3,6	CO6 CO7	PSO2 PSO3 PSO5
2	Operators: - Arithmetic operations on numbers, vectors and matrices - Area of circle, square ,rectangle and triangle - Volume of cube, cylinder ,cone - Simple and compound interest						1,2,3,6	CO6 CO7	PSO2 PSO3 PSO5
3	Control Structures: - Branching Structures: if, if – else, if – elseif – else and switch statements. - Looping Structures: do – while, while, for statements.						1,2,3,6	CO6 CO7	PSO2 PSO3 PSO7
4	To calculate series expansion of function(sin x, cos x, e ^x , etc.)						1,2,3,6	CO6 CO7	PSO2 PSO3 PSO7
5	Implementation of Numerical and Mathematical Algorithms computation : Using function file: To find out square root of the number using an iterative algorithm - Bisection Method, Runge-Kutta Method						1,2,3,6	CO6 CO7	PSO2 PSO3 PSO7
6	Trapezoidal Rule, Simpson’s Rule						1,2,3,6	CO6 CO7	PSO2 PSO3 PSO7
7	Numerical methods implementation using ‘C++’: Using function and class:						3,4,5,6	CO3 CO4	PSO5 PSO6 PSO7

	For obtaining roots of Non – linear equations: - Bisection Method - Regula Falsi Method - Newton Raphson Method					
8	For obtaining the approximate value of numerical integration: - Trapezoidal Rule - Simpson's 1/3rd Rule - Simpson's 3/8th Rule - Weddle's rule			3,4,5,6	CO3 CO4	PSO5 PSO6 PSO7
9	For solving the initial value problem: - Euler's Method			3,4,5,6	CO3 CO4	PSO5 PSO6 PSO7
10	For solving the linear system of equations: - Gauss Elimination - Gauss – Jacobi Method - Gauss – Seidal Method			3,4,5,6	CO3 CO4	PSO5 PSO6 PSO7
11	For obtaining the finite difference table and finding the value of y for an unknown x(not given in the table) using Interpolation - Newton – Forward Interpolation Formula - Newton – Backward Interpolation Formula - Langrange interpolation formula - Newton divided difference formula			3,4,5,6	CO3 CO4	PSO5 PSO6 PSO7
12	Operations on Complex Numbers using structure			1,2,3,4	CO3 CO4	PSO5 PSO6 PSO7
13	Area of circle, square ,rectangle and triangle,Volume of cube, cylinder ,cone,Simple and compound interest,Multiplication Table			1,2,3,4	CO3 CO4	PSO2 PSO3 PSO5
14	To calculate series expansion of function(sin x, cos x, e ^x , etc.)			1,2,3,4	CO3 CO4	PSO2 PSO3 PSO5

Bloom's Taxonomy Levels:

1. Remember 2. Understand 3. Application 4. Analysis 5. Evaluation 6. Creation

Programme Name: MSc. (Applied Mathematics)

Programme Specific Outcome (PSO)

- PSO1. Solve mathematical problems using analytical as well as numerical methods.
- PSO2. Assimilate complex mathematical ideas and arguments.
- PSO3. Recognize the relationships between different areas of Mathematics and the connections between Mathematics and other disciplines.
- PSO4. Give organized written and verbal explanations of mathematical reasoning in a precise and articulate manner.
- PSO5. Demonstrate basic mathematical understanding and computational skills.
- PSO6. Apply soft computing techniques.
- PSO7. Implement various algorithms using advanced Object Oriented Programming languages.
- PSO8. Demonstrate facility in computer programming, data processing, numerical simulation, scientific visualization, and virtual experimentation.
- PSO9. Describe the study of fundamental and advanced concepts in Mathematical Analysis.
- PSO10. Select appropriate methods for solving ordinary and partial differential equations which is arising in Mathematical modelling of problem.
- PSO11. Use appropriate software to solve practical problems.
- PSO12. Employ advanced statistical and optimisation techniques.
- PSO13. Build, Manage and Lead a team to successfully complete an industrial project and communicate across teams and organizations to achieve professional objectives.
- PSO14. Formulation of mathematical models and simulation of the problems in real world.
- PSO15. Inculcate their skills to deal with industrial problems.
- PSO16. Advanced understanding to qualify for various competitive exams to build their academic as well as industrial career.
- PSO17. Electives in the final year which elaborate prerequisite of the research field.
- PSO18. Hands-on practice for self preparation and developing presentation skills through project and seminar.
- PSO19. Training and Exposure to research literature and thesis writing through dissertation.

Syllabus of Courses

	The Maharaja Sayajirao University of Baroda Faculty Technology and Engineering Department of Applied Mathematics	Academic Year	2019-20							
M.Sc. (Applied Mathematics): Regular Programme										
Year	I	Core / Elective / Foundation AMT2204: Applied Analysis -II	Credits / Hours per week					05		
Semester	II	Year of Introduction: 2001 Year of Syllabus Revision: 2014	Maximum Marks / Grade					100		
Mode of Transaction		Lectures								
Course Outcome (CO) AMT2204 CO1 To be able to use the concepts of measurable set and measurable functions, concept the outer measure, measure, Lebesgue Measure, Measurable functions and its properties CO2 To be able to understand the integration of a measurable function over a measurable set, To be able to apply the theorems of monotone and dominated convergence and Fatou's lemma; CO3 To be able to understand the properties of LP-spaces, and Approximation theorems CO4 Understand the limitation of discontinuous function into series form and representation of function in Fourier series CO5 To learn about the representation of non periodic function into Fourier transform and to understand the properties of Fourier transform CO5 To learn about the representation of function given in discrete form in terms of discrete Fourier transform(DFT) ,properties of Fourier transform and algorithms of evaluating DFT using Fast Fourier Transform.

1. Remember 2. Understand 3. Application 4. Analysis 5. Evaluation 6. Creation

Programme Name: MSc. (Applied Mathematics)**Programme Specific Outcome(PSO)**

PSO1. Solve mathematical problems using analytical as well as numerical methods.

PSO2. Assimilate complex mathematical ideas and arguments.

PSO3. Recognize the relationships between different areas of Mathematics and the connections between Mathematics and other disciplines.

PSO4. Give organized written and verbal explanations of mathematical reasoning in a precise and articulate manner.

PSO5. Demonstrate basic mathematical understanding and computational skills.

PSO6. Apply soft computing techniques.

PSO7. Implement various algorithms using advanced Object Oriented Programming languages.

PSO8. Demonstrate facility in computer programming, data processing, numerical simulation, scientific visualization, and virtual experimentation.

PSO9. Describe the study of fundamental and advanced concepts in Mathematical Analysis.

PSO10. Select appropriate methods for solving ordinary and partial differential equations which is arising in Mathematical modelling of problem.

PSO11. Use appropriate software to solve practical problems.

PSO12. Employ advanced statistical and optimization techniques.

PSO13. Build, Manage and Lead a team to successfully complete an industrial project and communicate across teams and organizations to achieve professional objectives.

PSO14. Formulation of mathematical models and simulation of the problems in the real world.

PSO15. Inculcate their skills to deal with industrial problems.

PSO16. Advanced understanding to qualify for various competitive exams to build their academic as well as industrial career.

PSO17. Electives in the final year which elaborate prerequisite of the research field.

PSO18. Hands on practice for self-preparation and developing presentation skills through project and seminar.

PSO19. Training and Exposure to research literature and thesis writing through dissertation.

Syllabus of Courses

		The Maharaja Sayajirao University of Baroda Faculty Technology and Engineering Department of Applied Mathematics		Academic Year		2019-20				
M.Sc. (Applied Mathematics): Regular Programme										
Year	I	Core / Elective / Foundation AMT2201: Applied Statistics	Credits / Hours per week			05				
Semester	II	Year of Introduction: 2001 Year of Syllabus Revision: 2014	Maximum Marks / Grade			100				
Mode of Transaction		Lectures								
Course Outcome (CO) AMT2201 CO1:Implement how to translate uncertainty problems into probability models and will apply it directly in areas such as genetics, finance, telecommunications and biomathematics. CO2:Understand basic probability theory as well as be familiar with discrete and continuous random variables. CO3:Able to compute probabilities using various distributions and Chebisev’s inequality. CO4:Understand moments and moment generating functions of random variable. CO5:Classify Markov chain models and apply it to appropriate models. CO6:Able to analysis, classify and interpret data to answer questions about the real world problem. CO7:Understand data description, statistical inference, hypothesis testing, analysis of association and variance. CO8:Implement a proficiency in collection, organization, design, and drawing inferences from data using appropriate statistical methodology and problem solving skill. CO9:Able to demonstrate the ability to analyze data by appropriately fitting, assessing, and interpreting a variety of statistical models.

AMT 2205. MECHANICS

Dynamics of a rigid body, Euler's equation of motion, simple pendulum, spinning top, rigid body with a fixed point moving under no external forces.

Work and energy methods applied to the motion of particles & rigid bodies.

Impulsive motion and mechanical vibrations.

Lagrange and Hamiltonian dynamics: Lagrange's equations for a particle in a plane.

Hamilton's principle and principles of least action.

Hamilton – Jacobi theory, action – angle variables

Maps & Chaos : Poincare map, logistic map and Poincare- Birkhoff theorem.

Syllabus of Courses

	The Maharaja Sayajirao University of Baroda Faculty Technology and Engineering Department of Applied Mathematics	Academic Year	2019-20							
M.Sc. (Applied Mathematics): Regular Programme										
Year	II	Core/ Elective / Foundation AMT2308: Applied Fourier Analysis	Credits / Hours per week					05		
Semester	I	Year of Introduction:2001 Year of Syllabus Revision: 2014	Maximum Marks / Grade					100		
Mode of Transaction		Lectures								
Course Outcome (CO) AMT2308										
CO1 Understanding the limitations of expansion of discontinuous function into series and introduction to basic concepts and techniques concerning trigonometric sums.										
CO2 To learn about the concepts like orthogonality, orthonormality, completeness of system of functions in L^2 space and minimum property of Fourier coefficients with respect to general orthonormal system.										
CO3 To learn about the behavior of Fourier coefficients depending on nature of a function. Basic properties of Fourier coefficients, uniqueness of Fourier coefficients, convergence test for Fourier series, Cesaro summability and related theorems, absolute and uniform convergence.										
CO4 Understanding the concept of completeness of Orthogonal system with reference to system of Walsh functions, techniques of deriving Walsh functions.										
CO5 Introduction to other orthogonal functions like block pulse functions, Haar functions.										
CO6 Extending the idea of Fourier transform to transforms using orthogonal functions like Walsh and Haar.

1. Remember 2. Understand 3. Application 4. Analysis 5. Evaluation 6. Creation

Programme Name: MSc. (Applied mathematics)**Programme Specific Outcome(PSO)**

PSO1. Solve mathematical problems using analytical as well as numerical methods.

PSO2. Assimilate complex mathematical ideas and arguments.

PSO3. Recognize the relationships between different areas of Mathematics and the connections between Mathematics and other disciplines.

PSO4. Give organized written and verbal explanations of mathematical reasoning in a precise and articulate manner.

PSO5. Demonstrate basic mathematical understanding and computational skills.

PSO6. Apply soft computing techniques.

PSO7. Implement various algorithms using advanced Object Oriented Programming languages.

PSO8. Demonstrate facility in computer programming, data processing, numerical simulation, scientific visualization, and virtual experimentation.

PSO9. Describe the study of fundamental and advanced concepts in Mathematical Analysis.

PSO10. Select appropriate methods for solving ordinary and partial differential equations which is arising in Mathematical modelling of problem.

PSO11. Use appropriate software to solve practical problems.

PSO12. Employ advanced statistical and optimization techniques.

PSO13. Build, Manage and Lead a team to successfully complete an industrial project and communicate across teams and organizations to achieve professional objectives.

PSO14. Formulation of mathematical models and simulation of the problems in the real world.

PSO15. Inculcate their skills to deal with industrial problems.

PSO16. Advanced understanding to qualify for various competitive exams to build their academic as well as industrial career.

PSO17. Electives in the final year which elaborate prerequisite of the research field.

PSO18. Hands on practice for self-preparation and developing presentation skills through project and seminar.

PSO19. Training and Exposure to research literature and thesis writing through dissertation.

Syllabus of Courses

	The Maharaja Sayajirao University of Baroda Faculty Technology and Engineering Department of Applied Mathematics	Academic Year	2019-20							
M.Sc. (Applied Mathematics): Regular Programme										
Year	II	Core / Elective / Foundation AMT2303: Fluid Dynamics	Credits / Hours per week					05		
Semester	I	Year of Introduction: 2001 Year of Revision of Syllabus: 2014	Maximum Marks / Grade					100		
Mode of Transaction		Lectures								
Course Outcome (CO) AMT2303 CO1 To be able to understand the basics for Fluid Dynamics. To be able to Classify and exploit fluids based on the physical of a fluid, To be able to compute the Kinematical properties of a fluid element. CO2 To be able to apply the conservation principles of mass, linear momentum, and energy to fluid flow systems. To be able to understand flow equations with applications. CO3 To be able to understand the Navier-Stokes’ equation, and Demonstrate the ability to model inviscid, steady fluid flow. CO4 To be able to understand the complex Potential flow and related applications CO5 To be able to understand the viscous incrompressible flow using Navier- Stokes equation. CO6 To be able to understand the Boundary layer and its application CO7 To be able to solve Industry related flow problems.

Syllabus of Courses

	The Maharaja Sayajirao University of Baroda Faculty Technology and Engineering Department of Applied Mathematics		Academic Year		2019-20					
M.Sc. (Applied Mathematics): Regular Programme										
Year	II	Core / Elective / Foundation AMT 2304:OPTIMIZATION I	Credits / Hours per week				05			
Semester	I	Year of Introduction: 2001 Year of Syllabus Revision: 2014	Maximum Marks / Grade				100			
Mode of Transaction		Lectures								
Course Outcome (CO) : AMT 2304 CO1: Able to formulate and choose appropriate methodology to solve an optimization problem according the classification in terms of Linear/Non-Linear, Single Variable/Multi-Variable, With Constraint/Without Constraint. CO2: Understand and can successfully apply the classical theory of optimization, to solve various problems which belongs to classes; viz. single/multivariate problems without constraints, Lagrange method for problems having equality constraints and theory of Kuhn-Tucker for problems having inequality constraints. CO3: Able to choose and apply an appropriate method from various methods designed for single variable optimization problems. CO4: Develops an ability to choose appropriately from various available methods designed for solving Multivariable optimization problems (Unconstrained and Constrained) and apply them successfully for desired solution. CO5: Apply optimization methods to various real life areas, engineering problems , industrial problems CO6: Interpreting results and effects of change in the structure or parameters of Optimization problems. CO7:Understand and apply constrained optimization theory for continuous problems, involving integer solutions or including the Kuhn-Tucker conditions for quadratic programming.

	The Maharaja Sayajirao University of Baroda Faculty Technology and Engineering Department of Applied Mathematics	Academic Year	2019-20							
M.Sc. (Applied Mathematics): Regular Programme										
Year	II	Core / Elective / Foundation AMT2313: Simulation and Mathematical Modelling	Credits / Hours per week					05		
Semester	I	Year of Introduction: 2007 Year of Syllabus Revision: 2014	Maximum Marks / Grade					100		
Mode of Transaction		Lectures								
Course Outcome (CO) AMT2313 CO1 Understand different methods for random number generation. CO2 Have a clear understanding of the need for the development process to initiate the real problem. CO3 Have a clear understanding of principle and techniques of mathematical and simulation methods CO4 Be able to describe the components of continuous and discrete systems and simulate them. CO5 Be able to model any system from different fields . CO6 Be able to implement numerical algorithm to solve the mathematical model that meet the real life requirements. CO7 Be able to discuss the simulation methods and select the suitable technique to apply on the several problems. CO8 Know how to simulate any system. CO9 Have a clear understanding of the system to be studied.										
Unit No.	Topic		Contact Hours	Weightage (%)	BT Level	CO	PSO	Element s of Employability (Emp)/ Entrepreneurship (Ent)/ Skill Development (SD)	Relevan ce to Local (L)/ National (N)/ Regional (R)/Glob al (G)	Relation to Gender (G), Environ ment and Sustainab ility (ES), Human Values (HV)and Profession al Ethics (PE)

1	Random numbers: Generating uniform random variables: Pseudo – random numbers, congruential generators and their properties, alternative approaches. Testing random numbers: empirical and theoretical tests or sequences of uniform random numbers, General methods: Inversion method, acceptance-rejection, composition methods. Particular methods for non-uniform random variables, Box–Muller methods to generate normal variates. Exponential, Binomial and Poisson variates.	10	16.66	1,2,3,6	CO1	PSO2 PSO4 PSO8 PSO11	SD	G	PE
2	Discrete Event simulation modeling: Introduction to simulation modeling, Queuing models, Simulation of queueing systems, Output analysis of short and long term performance, Verification and validation, Statistical simulations: Monte-Carlo simulation, Variance reduction technique: Arithmetic variables, conditioning, control variates, importance sampling and common random numbers, Simulation inference.	10	16.66	1,3,4,5	CO3 CO4 CO8	PSO3 PSO5 PSO10 PSO11			
3	Needs and Techniques of mathematical modeling: Idea of mathematical modeling, need for mathematical modeling, steps in mathematical modeling, Characteristics of mathematical modeling, Interpretation. Models in mechanical vibration :Spring mass system, pendulum problems. Models in population dynamics:One species model, logistic model, growth model in time delays, Predator-Prey models, Volterra-Lotka models.	10	16.66	1,2,3,4,5,6	CO2 CO5 CO6 CO9	PSO1 PSO3 PSO5 PSO10			
4	Models of chemical processes, Electrical network and Diffusion processes, Partial Differential Equations models, Traffic flow models and different pde models pertaining to human physiology. Models of chemical processes, Electrical network and Diffusion processes	10	16.66	3,4,5,6	CO5 CO6 CO9	PSO1 PSO3 PSO5 PSO10			
5	Modeling dynamical systems: differential equations and their numerical solution, linear and non-linear dynamics, stability, convergence, attractors. Physical systems: System types and characteristics behaviour, Continuous-time,discrete – time and discrete -event systems, linear and non linear systems.	10	16.66	2,4,5	CO7 CO8 CO9	PSO3 PSO5 PSO9 PSO10			
6	Exploration of behaviour through simulation: developing	10	16.7	3,4,5,6	CO7	PSO5			

	simulations of dynamical systems using Matlab : representation and visualization of simulation experiments, analyzing behavioural characteristics for a range of classes of physical and computational systems eg. Predictor- prey models, evolutionary systems and cellular systems				CO8 CO9	PSO6 PSO8 PSO11

Bloom's Taxonomy Levels:

1. Remember 2. Understand 3. Application 4. Analysis 5. Evaluation 6. Creation

Programme Name: MSc. (Applied Mathematics)**Programme Specific Outcome (PSO)**

- PSO1. Solve mathematical problems using analytical as well as numerical methods.
- PSO2. Assimilate complex mathematical ideas and arguments.
- PSO3. Recognize the relationships between different areas of Mathematics and the connections between Mathematics and other disciplines.
- PSO4. Give organized written and verbal explanations of mathematical reasoning in a precise and articulate manner.
- PSO5. Demonstrate basic mathematical understanding and computational skills.
- PSO6. Apply soft computing techniques.
- PSO7. Implement various algorithms using advanced Object Oriented Programming languages.
- PSO8. Demonstrate facility in computer programming, data processing, numerical simulation, scientific visualization, and virtual experimentation.
- PSO9. Describe the study of fundamental and advanced concepts in Mathematical Analysis.
- PSO10. Select appropriate methods for solving ordinary and partial differential equations which is arising in Mathematical Modelling of problem.
- PSO11. Use appropriate software to solve practical problems.
- PSO12. Employ advanced statistical and optimization techniques.
- PSO13. Build, Manage and Lead a team to successfully complete an industrial project and communicate across teams and organizations to achieve professional objectives.
- PSO14. Formulation of mathematical models and simulation of the problems in real world.
- PSO15. Inculcate their skills to deal with industrial problems.
- PSO16. Advanced understanding to qualify for various competitive exams to build their academic as well as industrial career.
- PSO17. Electives in the final year which elaborate prerequisite of the research field.
- PSO18. Hands-on practice for self preparation and developing presentation skills through project and seminar.
- PSO19. Training and Exposure to research literature and thesis writing through dissertation.

Syllabus of Courses

	The Maharaja Sayajirao University of Baroda Faculty Technology and Engineering Department of Applied Mathematics				Academic Year				2019-20			
M.Sc. (Applied Mathematics)Industrial Mathematics: Regular Programme												
Year	II	Core / Elective / Foundation AMT2305: Wavelets and Image Processing			Credits / Hours per week				05			
Semester	I	Year of Introduction: 2001 Year of Syllabus Revision: 2014			Maximum Marks / Grade				100			
Mode of Transaction		Lectures										
Course Outcome (CO) AMT2305 CO1 A deeper understanding of limitations of Fourier analysis in signal processing and why wavelets are better for digital signal processing. CO2 Understand about windowed Fourier transform and difference between windowed Fourier transform and wavelet transform. CO3 Importance of Multi Resolution Analysis(MRA) and construction of wavelets from MRA. CO4 Implement decomposition and reconstruction of signal using detailed wavelet coefficient and justify the basis of the application of wavelet transforms to different fields. CO5 Understand Wavelet packets. CO6 Describe basic image related concepts. CO7 Explain various image enhancement and restoration techniques. CO8 Describe colour image processing, image compression, image segmentation and representation.												
Unit No.	Topic				Contact Hours	Weightage (%)	BT Level	CO	PSO	Element s of Employa bility (Emp)/ Entrepre neurship (Ent)/ Skill Develop ment (SD)	Relevan ce to Local (L)/ National (N)/ Regional (R)/Glob al (G)	Relation to Gender (G), Environm ent and Sustainabi lity (ES), Human Values (HV)and Professio nal Ethics (PE)

1	Fourier theory, sampling, signal processing, time-frequency representations. Short time Fourier transform and Continuous wavelet transform, admissibility condition, some well-known wavelets.	12	20	1,2	CO1 CO2	PSO4 PSO5	SD	G	PE
2	Multiresolution Analysis Process, Analysis of Haar expansion of discrete -time signals, Wavelet transform and filter banks, Multichannel Filter Banks, Decomposition and Reconstruction scheme,	14	23	1,2,3	CO3 CO4	PSO4 PSO9			
3	Othonormal Wavelets, Biorthogonal Wavelets. Construction by lifting scheme: "next-generation wavlets", Mallat's MRA and Wavlet-Packets, Multidimensional Wavelets.	10	17	1,2,3,6	CO1 CO5	PSO5 PSO6			
4	Introduction to image processing: Fundamental steps in image processing, Digital image modelling, Image sampling and quantization-spatial and grey level resolution, zooming and shrinking digital images, relationship between pixels, Labelling connected components. Image enhancement in special domains: Basic grey level transformations, Image negatives, Histogram processing, Enhancement using arithmetic logic operations, Image averaging, Basics of special filtering, smoothing and sharpening filters, combining spatial enhancement methods.	9	15	1,2,3	CO7	PSO2 PSO3			
5	Image enhancement in frequency domain: 1-D and 2-D Fourier transforms and its inverse, 1-D and 2-D DFT and its inverse, Filtering in frequency domain, smoothing and sharpening frequency domain filters. Colour image image processing: Colour fundamentals, colour image models, pseudo colour image processing, colour transformations, colour complements, colour slicing.	9	15	3,4,5	CO6 CO7 CO8	PSO3 PSO8			
6	Image segmentation: Detection of discontinuities, Edge linking and boundary detection, global processing via Hough transform. Segmentation by Morphological water shades.	06	10	3,4,5,6	CO5 CO6 CO7	PSO2 PSO3 PSO8

Semester	II	Year of Introduction: 2001 Year of Syllabus Revision: 2014	Maximum Marks / Grade				80			
Mode of Transaction		Lectures								
Course Outcome (CO) AMT 2416 CO1: According to the nature of the problem, can apply various type of algorithms to solve variety type of multivariate constrained optimization problems. CO2: Understands and can successfully apply non-traditional methods viz. Genetic Algorithms and Simulated Annealing to solve multivariable non-linear programming problems. CO3: Be able to apply technique for solving Stochastic LPP as well as NLPP. CO4: Apply optimization techniques for solving multistage continuous or discrete problems. CO5: Understand and apply project evaluation techniques using PERT and CPM on network models. CO6: Formulate and solve multi objective LPP problems.

Bloom's Taxonomy Levels:

1. Remember 2. Understand 3. Application 4. Analysis 5. Evaluation 6. Creation

Programme Name: MSc. (Applied Mathematics))

Programme Specific Outcome(PSO)

PSO1. Solve mathematical problems using analytical as well as numerical methods.

PSO2. Assimilate complex mathematical ideas and arguments.

PSO3. Recognize the relationships between different areas of Mathematics and the connections between Mathematics and other disciplines.

PSO4. Give organized written and verbal explanations of mathematical reasoning in a precise and articulate manner.

PSO5. Demonstrate basic mathematical understanding and computational skills.

PSO6. Apply soft computing techniques.

PSO7. Implement various algorithms using advanced Object Oriented Programming languages.

PSO8. Demonstrate facility in computer programming, data processing, numerical simulation, scientific visualization, and virtual experimentation.

PSO9. Describe the study of fundamental and advanced concepts in Mathematical Analysis.

PSO10. Select appropriate methods for solving ordinary and partial differential equations which is arising in Mathematical modelling of problem.

PSO11. Use appropriate software to solve practical problems.

PSO12. Employ advanced statistical and optimisation techniques.

PSO13. Build, Manage and Lead a team to successfully complete an industrial project and communicate across teams and organizations to achieve professional objectives.

PSO14. Formulation of mathematical models and simulation of the problems in real world.

PSO15. Inculcate their skills to deal with industrial problems.

PSO16. Advanced understanding to qualify for various competitive exams to build their academic as well as industrial career.

PSO17. Electives in the final year which elaborate prerequisite of the research field.

PSO18. Hands-on practice for self preparation and developing presentation skills through project and seminar.

PSO19. Training and Exposure to research literature and thesis writing through dissertation.

Syllabus of Course:

		The Maharaja Sayajirao University of Baroda Faculty Technology and Engineering Department of Applied Mathematics			Academic Year		2019-20	
M.Sc. (Applied Mathematics) Industrial Mathematics: Regular Programme								
Year	II	Core / Elective / Foundation AMT2428L : Practicals on Computational Fluid Dynamics			Credits / Hours per week		01	
Semester	II	Year of Introduction: 2001 Year of Syllabus Revision: 2014			Maximum Marks / Grade		20	
Mode of Transaction		Term Work, Practical & Viva						
No.	Experiment				Course Code	BT Level	CO	PSO
1	Programs for Solution of Elliptic equation (Laplace and Poisson) using Standard five point formula				AMT2417	1, 2, 5	CO2, CO4	PSO1, PSO5, PSO18
2	Programs for Solution of Elliptic equation (Laplace and Poisson) using Standard nine point formula					1, 2, 5	CO2, CO4	PSO1, PSO5, PSO18
3	Programs for Solution of Parabolic equations using explicit schemes using FTCS method, Richardson method, Dufort-Frankel method.					1, 2, 4, 5	CO2, CO3, CO4	PSO1, PSO5, PSO18
4	Programs for Solution of Parabolic equations using implicit schemes using Laasonen Method, Crank-Nicolson Method, Beta method					1, 2, 4, 5	CO2, CO3, CO4	PSO1, PSO5, PSO18
5	Programs for Solution of Hyperbolic equation using explicit schemes using FTFS method, FTCS method, FTBS method					1, 2, 4, 5	CO2, CO3, CO4	PSO1, PSO5, PSO18
6	Programs for Solution of Hyperbolic equation using explicit schemes using Lax method, Midpoint Leapfrog method, Lax-wendroff method					1, 2, 4, 5	CO2, CO3, CO4	PSO1, PSO5, PSO18
7	Programs for Solution of Hyperbolic equation using implicit schemes using Euler’s FTCS					1, 2, 5	CO2, CO4	PSO1, PSO5, PSO18
8	Programs for Solution of Hyperbolic equation using implicit schemes using Crank Nicholson method					1, 2, 5	CO2, CO4	PSO1, PSO5, PSO18
9	Programs for Solution of nonlinear first order hyperbolic equation using Lax method, Lax-Wendroff method					1, 2, 4, 5	CO2, CO3, CO4	PSO1, PSO5, PSO18
10	Programs for Solution of nonlinear first order hyperbolic equation using MacCormack method					1, 2, 5	CO2, CO4	PSO1, PSO5, PSO18
11	Programs for Solution of nonlinear first order hyperbolic equation using Beam-Warming Implicit Method					1, 2, 5	CO2, CO4	PSO1, PSO5, PSO18
12	Programs for Solution of Burger’s equation					1, 2, 5	CO2, CO4	PSO1, PSO5, PSO18
